PROFILE

Since childhood, I have been fascinated by creating new things and solving problems creatively. My interests ranged from electronics and design to software development. When I discovered programming, it quickly became my strongest passion. What began as a personal interest developed into a long-term professional path. Over the years, I have built many web applications, APIs, and digital products while gaining both technical and organizational experience. Working in teams and taking responsibility as a frontend team lead helped me develop my technical and interpersonal skills. Today I focus on modern web technologies such as JavaScript, TypeScript, React, Next.js, PHP, and MySQL. My goal is to build innovative, scalable, and user-friendly software solutions.

WORK EXPERIENCE

Frontend Developer - ETMITA

Approx. 1 year - Present

1. Developing modern user interfaces with React and Next.js
2. Component design and frontend architecture
3. Collaboration within development teams
4. Experience coordinating teams and leading selected frontend projects

PROJECTS

ETMITA Passport - Product identification platform using QR-code technology to provide detailed product information.

Bilifx - Educational platform for trading courses with course management and modern landing pages.

Taskodo - Personal task-management system with analytics and a productivity dashboard.

Whisper - Modern real-time chat application focused on user experience and scalability, currently in development.

Additional projects - Development of numerous web applications, APIs, and custom software solutions.
